

Treatment Response And Client Tracking (TRACT) iPad application

TRACT is an iPad application for use to evaluate the effectiveness of any interventions using a case study, a case-comparison or randomized controlled trial design format. TRACT may also be used as an "in the field" objective structured clinical examination (OSCE), wherein students observe and record assessment and intervention within the same diagnostic cluster or individual patient, sharing their findings among themselves or with their preceptor or clinical instructor.

A single \$49.99 payment will permit the user to use TRACT Version 1.x on iPad in accordance with iTunes' policies from the date of payment and will be charged to the user-associated iTunes account at confirmation of purchase.

TRACT is downloaded "as is" and International Graduate Medical Education Inc. and TRACT developers are not responsible for any liability incurred as a result of the use of the TRACT iPad application.
